Booking.com

Amsterdam, Netherlands

2014 Aug - Current

FrontEnd Developer & Onboarding Lead

Customer Service Innovations Team

Identify and eliminating friction in a customers journey to contact Booking.com. Analyzing common customer behavior and identify patterns customer service ticket and innovating solutions to reduce human handling and improve automation.

- HTML
- CSS
- Perl
- JavaScript
- React
- A/B Testing

Onboarding Leading (Management)

Leading the onboarding journey for new hires and onboarding them in their first few weeks. Setting up trainings, tracking their development and providing feedback (and automating these processes using Google Drive Scripts). Identifying skills, strengths, weaknesses and mapping interests of the developers and match them to place them within different teams in the company. Contributing to development of advanced tools to make onboarding process smoother.

- Team Leading
- Trainings
- Agile / Scrum / Retrospectives
- Capacity Planning
- React

Landing Pages Team

In Landing Pages Team, I work on making user research, applying user research data in terms of A/B Tests and optimizing landing pages (mobile, tablet and web) for traffic sources from meta partners, SEO etc. and building tools to automate processes using Bash and Node.JS. Also, supported and facilitated onboarding new developers on the team.

- NodeJS
- A/B Testing

Destination Finder Team

As a JavaScript developer in Destination Finder, I worked on rewriting the core routing component of the system and a new search box along with routine Frontend / Javascript tasks. I also implemented Google Analytics to track user's behavior on different pages and at different actions on a page. These metrics along with A/B Testing helped on decision making for better usability and conversion.
